

LA FRANÇAISE

La Française LUX - JKC ASIA BOND - Class I - USD - CAPITALISATION- LU1190460847

A share class of La Française LUX - JKC ASIA BOND (the “Fund”),
a sub-fund of the UCITS La Française LUX (The “UCITS”)
The Fund is managed by La Française Asset Management,
part of La Française group of companies

OBJECTIVES AND INVESTMENT POLICY

The objective of the Fund is to achieve income and capital growth (total return). Index benchmark (for context purposes only) Markit iBoxx Asian Dollar Bond Index.

The Fund invests mainly in government and corporate bonds of any credit quality from Asian Pacific countries, excluding Japan.

Specifically, the Fund invests up to 100% of its net assets in fixed and floating rate debt securities as well as in inflation rate and money market instruments that are issued in those countries. The sub-fund may also invest in debt securities issued in other countries.

The Fund may invest in, or be exposed to, the following investments up to the percentage of net assets indicated:

- convertible bonds: 30%
- contingent convertible bonds (coco bonds): 20%
- equities (through exposure from convertible bonds): 10%
- other UCITS/UCIs: 10%

RISK AND REWARD PROFILE

Risk and Reward Profile: The SRRI (Synthetic Risk and Reward Indicator) demonstrates where the Fund ranks in terms of its potential risk and return. The higher the Fund’s position on this scale, the greater possible reward, but also the greater risk of losing money.

The risk category is 3 because of investments in stocks, and particularly in emerging markets

We bring your attention to the fact that:

- Historical data used in calculating the SRRI may not be a reliable indication of the future risk profile of the Fund.

- The risk indicator shown above is not guaranteed and it may shift over time.

The lowest category does not mean a risk free investment.

Risks materially relevant to the Fund which are not adequately captured in the indicator:

Credit risk: the Fund can invest in debt securities. There is a risk that the issuer may default. The likelihood of this happening will depend on the credit-worthiness of the issuer.

Counterparty risk: the Fund enters into contracts with various counterparties. If a counterparty does not fulfil its obligations to the Fund (e.g. not paying an agreed amount or not delivering securities as agreed) the Fund can suffer a loss.

Interest rate risk: an increase in interest rates may cause the value of fixed income securities held by the Fund to decline. Bonds prices and yield have an inverse relationship, when the price of a bond falls the yield rises.

Key investor information

This document provides you with key investor information about this Fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this Fund. You are advised to read it so you can make an informed decision about whether to invest.

The Fund may hold cash and cash equivalents on an ancillary basis. These may include monetary UCIs or UCIs whose investments’ overall weighted maturity or rate reset frequency does not exceed 12 months.

Net exposure to local currencies may be up to 20% of net assets, and to G7 currencies up to 100%. Non-USD investments may be hedged to USD.

The Fund’s modified duration may vary from 0 to 10.

The investment manager uses a long-only approach that is based on global economic and financial analysis as well as analysis of companies’ balance sheets and insights into sovereign debt fundamentals.

The Fund may use derivatives as a substitute for direct investment, for hedging, for efficient portfolio management and to create leverage.

The Fund may also use credit default swaps (including those based on indices).

You can buy and sell shares of the Fund daily.

All income generated by share Class I - USD - CAPITALISATION of the Fund is reinvested and included in the value of its shares.

Recommendation: This Fund may not be appropriate for investors who plan to withdraw their money within 3 to 5 years.

Emerging markets risk: emerging markets are more likely to experience political uncertainty and investments held in these countries may not have the same protection as those held in more developed countries.

Derivative risk: the Fund uses derivatives. These are financial instruments whose values depend on the value of the underlying asset. Small price fluctuations in the underlying asset can result in large price changes in the derivative.

Contingent Convertible (“Coco”) Bond Risk: investment in this particular type of bond may result in material losses to the Fund based on certain trigger events.

The existence of these trigger events creates a different type of risk from traditional bonds and may more likely result in a partial or total loss of value or alternatively they may be converted into shares of the issuing company which may also have suffered a loss in value. Such trigger events may include a reduction in the issuers’ capital ratio, determination by a regulator or the injection of capital by a national authority. Investors should be aware that in the event of a financial crisis that action by regulators or the companies themselves may cause concentrations of these trigger events across the Fund.

Call extension risk: Some CoCos are issued as perpetual instruments, callable at pre-determined levels only with the approval of the competent authority. It cannot be assumed that the perpetual CoCos will be called on call date. Some CoCos are a form of permanent capital. The investor may not receive return of principal if expected on call date or indeed at any date.

Unknown risk: the structure of the instruments is innovative yet untested. In a stressed environment, when the underlying features of these instruments will be put to the test, it is uncertain how they will perform. In the event a single issuer activates a trigger or suspends coupons, will the market view the issue as an idiosyncratic event or systemic? In the latter case, potential price contagion and volatility to the entire asset class is possible. This risk may in turn be reinforced depending on the level of underlying instrument arbitrage. Furthermore in an illiquid market, price formation may be increasingly stressed.

📍 CHARGES

The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

ONE-OFF CHARGES TAKEN BEFORE OR AFTER YOU INVEST	
Entry charge	3.00%
Exit charge	None

This is the maximum that might be taken out of your money before it is invested and/or before the proceeds of your investment are paid out. The entry and exit charges shown are maximum figures. In some cases you might pay less - you can find this out from your financial adviser.

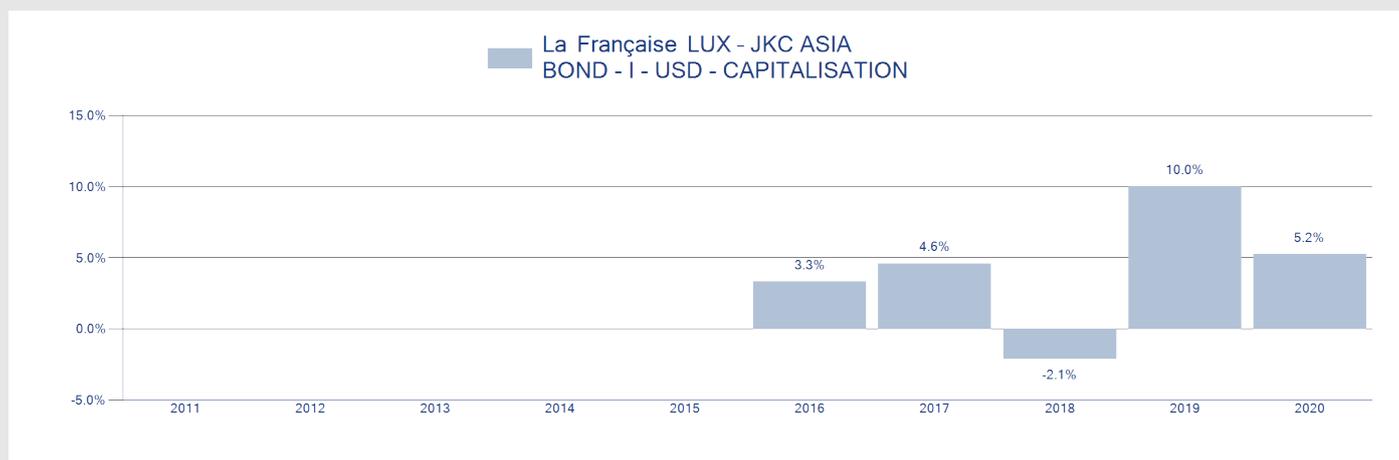

CHARGES TAKEN FROM THE FUND OVER A YEAR	
Ongoing charges	1.29%

The ongoing charges figure is based on expenses for the year ending 31/12/2020. This figure may vary from year to year.

CHARGES TAKEN FROM THE FUND UNDER CERTAIN SPECIFIC CONDITIONS	
Performance fee	None

For more information about charges, please refer to the UCITS' prospectus, which is available at the registered office of the UCITS.

📍 PAST PERFORMANCE

The Fund came into existence during the year 2015.

The past performance of this share class has been calculated in USD, taking into account all charges and costs except for entry charges.

Past performance is not a reliable indicator of future results.
